HOW TO DRAW OWL

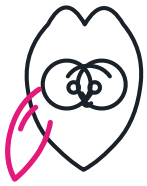

THE DRAWING FIX™ · MIDNIGHT OWL
GRADES 2–4 · 12 STEPS
NAME: _____

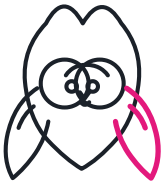

1 Draw the owl head shape.
Start near the upper middle. Draw two pointed ear tufts, then curve down into the cheeks.

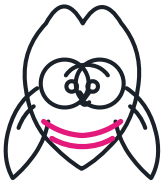

2 Add the big owl eyes and beak.
Place one large eye on each side of the centre. Tuck a small beak between them.

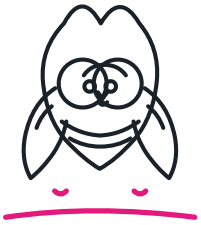

3 Build the left wing.
From the left side of the owl, sweep outward and down. Add one shorter feather line inside.

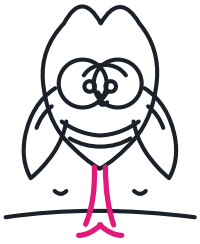

4 Build the right wing.
Now mirror the wing on the right. Keep it similar, not necessarily identical.

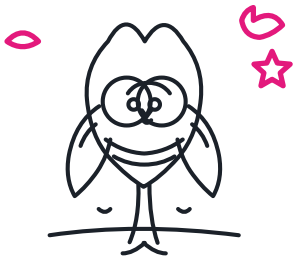

5 Add the chest feathers.
Put two gentle curved rows on the chest to suggest layered feathers.

6 Draw the branch and feet.
Place a wide branch under the owl. Then add one little foot shape on each side.

7 Add the tail lines.
From the bottom centre, make one tail feather line left and one right.

8 Finish with the moon and stars.
Add one moon shape to one side and a few stars around it to finish the sky.

9 Add tiny sky details.
Put two or three tiny stars or dots in open spaces. Do not crowd the page.

10 Add branch texture.
Give the branch one short bark line and one knot.

11 Add one pattern row on the wings.
Place one short curved line on each wing to suggest another feather layer.

12 Make one part yours.
Add something original: snow, leaves, a different moon, or a tiny treasure.
