

THE FIXES™ SCHEDULE

Familiar. Live. Yours. **Look. Know. Go.** A projected visual schedule that follows the clock, shows what is happening now and what comes next, runs calm transitions, and puts a Fix or a whole-class game one tap away.

THE FIXES™ SCHEDULE

PREVIEW

EDIT TODAY

Preview mode shown. In Live mode the schedule follows the real clock.

QUICK START

1 · OPEN IT

Open the HTML file in Chrome, Edge, Safari or Firefox on the classroom computer. Project it full-screen. No accounts, no login, no internet needed for the schedule itself.

2 · SET UP YOUR WEEK

Press **Set Up Week / Cycle**. Choose Mon-Fri or a Day 1-5 cycle, add your blocks, then **Save My Schedule**. It loads automatically every day after that.

3 · START TODAY

Press **Start Today's Schedule**. The current block, time left and what's next update on their own. Try **Preview Sample Day** first if you want to explore safely.

EVERYTHING SAVES ON THIS BROWSER. Your week, today's changes, your agenda note, Day Rescue and Morning Mix progress all stay on this computer and browser. There are no student names, accounts or data. A different computer, a different browser, private browsing or clearing browser data will start fresh.

Build your week

Open **Set Up Week / Cycle** from the start screen, the schedule panel, or Teacher Controls.

Schedule runs on	MON-FRI for a weekly timetable, or DAY 1-5 for a rotating cycle. With a cycle, choose which day today is.
Language	English, Español, or English + Español on screen.
Visual support	Words + visuals, larger visuals for younger or visual learners, or words only.
Editing a day	Pick a day, then + Add Activity . Common activities get a visual automatically; tap the visual to change it. Set each block's start and end time and its transition type.
Copy / reset	Copy This Day to All 5 builds a whole week from one good day. Reset This Day clears that day only.
Save	Press Save My Schedule . It loads by itself every morning.

UNUSUAL DAY? EDIT TODAY ONLY

Edit Today changes just today — an assembly, a field trip, a cancelled block — without touching your saved week. Tomorrow goes back to normal automatically.

NAME YOUR FIXED TIMES CLEARLY

Day Rescue protects blocks that cannot move. It recognises them by name or visual: **Recess, Lunch, Dismissal, Assembly, Gym / Phys Ed, Music, French, Library, Art**. Name those blocks plainly (for example "Lunch", not "Break 2") and the schedule will always protect them.

THE TEACHER DESK

Today's Agenda	The lined note card. Tap Edit to write one clear message for students to copy home ("Library books tomorrow"). It stays for today on this browser.
Today's Focus	The short focus line under the current block (for example "Clean transitions. Kind words. Strong focus."). Change it in Teacher Controls → Edit Today's Focus .
Game Links	Teacher Controls → Game Links saves direct web addresses for your games, so classroom tools launch them while the schedule keeps running.

What the room sees — and your controls

The centre stage shows the current block, its time, a large **minutes-left** countdown and progress bar. The left column is the whole day; the current block is highlighted and the next one is marked. It all updates on its own.

TRANSITIONS: CLASS VS. THE MACHINE

When a switch is coming up, the screen shows **TRANSITION SOON**. Start the Transition Challenge from the preview card (or press **T**). The Machine “locks the route”; the class clears three quick checkpoints — **put it away · get ready · eyes up / move safely** — and the teacher presses **Start Auto Sequence** once. Each clean transition reclaims a cell on the **Class vs. Machine** bar (5 per day). **+10 sec** gives more time; **End Event** stops it.

TEACHER CONTROLS

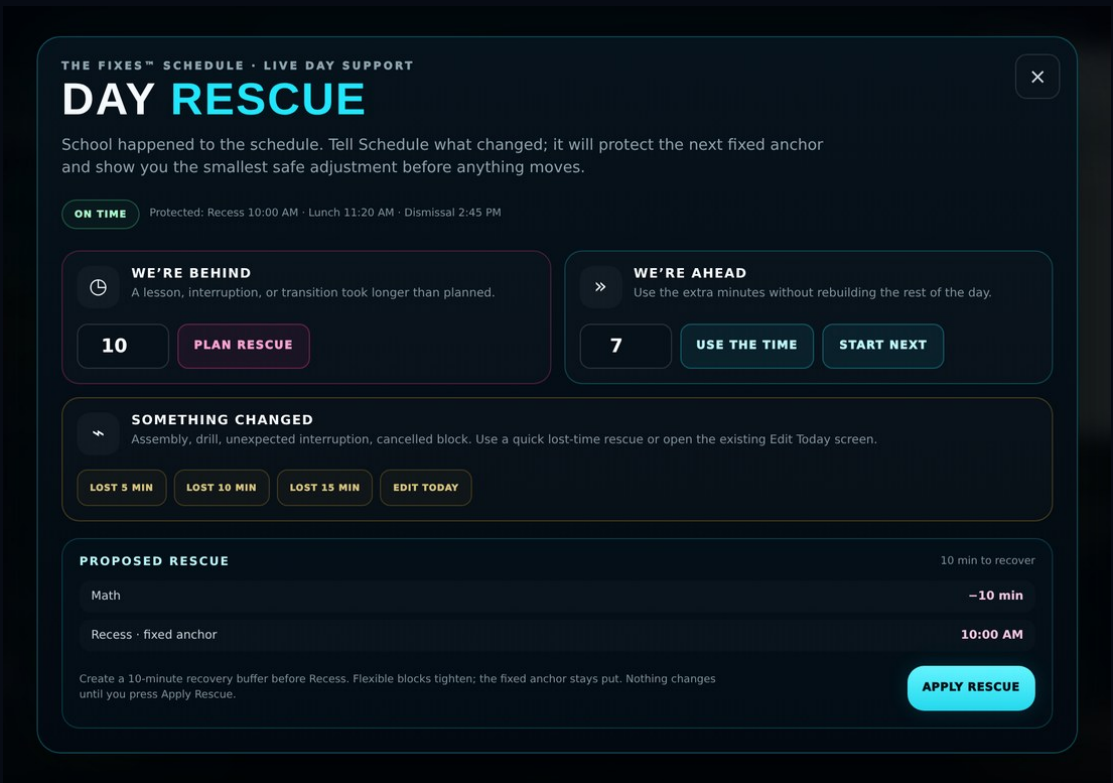

Previous / Next Activity	Jump the display back or forward one block.
End Current & Move On	Finish the current block early and start the next one now.
Pause Clock	Freeze the countdown (fire drill, visitor at the door). Resume or Return to Live to follow the real clock again.
+5 / +10 Minutes	Extend the current block.
Return to Live	Undo manual jumps and follow the clock.

CLASSROOM TOOLS (TEACHER DESK)

We Have Time	Pick 3, 5, 10 or 20+ minutes and get whole-class games that fit.
Run a Fix	Pick the classroom moment (talking over directions, dragging transition, noisy line-up, frustration rising...) and run a short, step-by-step Fix-It Mission right on the screen. 30 Fixes. Use ← / → to step through, Esc to close.
Play	Whole-class games — one screen, no student devices.
Pin Schedule	Opens a small always-visible window with Now, time left and Next — handy when you are showing something else. Allow pop-ups if the browser asks.
Browse	Show a website, YouTube video, image or PDF in the middle of the screen while the schedule and timer keep running. If a site refuses to appear, press Open Tab. Return to Live (or Esc) closes it.

Day Rescue

School happens to the schedule. Open **Day Rescue** from the Teacher Desk. It reads where you are, protects the next fixed time, and shows the smallest safe change — **nothing moves until you press Apply Rescue**.

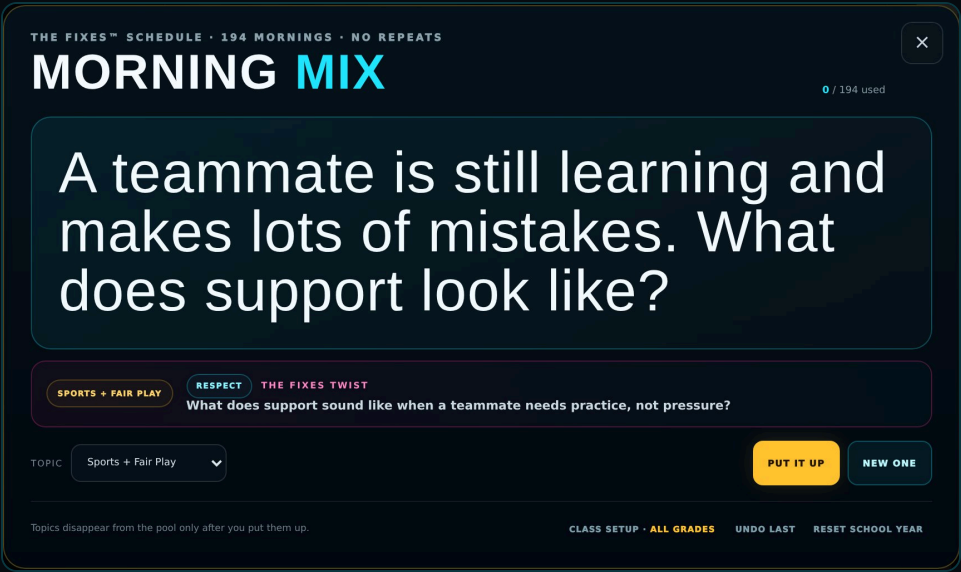

We're Behind	Enter how many minutes you are behind and press Plan Rescue . Flexible blocks before the next fixed time get a little shorter (never below a safe minimum, at most 12 minutes from any one block), and the recovered minutes become a buffer just before the fixed time. Recess, lunch and the other fixed times do not move.
Something Changed	One-tap Lost 5 / 10 / 15 min for assemblies, drills or interruptions — or jump straight to Edit Today .
Not enough room?	If the minutes can't be recovered safely before the next fixed time, Day Rescue says so ("Only 12 safe minutes can be recovered...") and suggests Edit Today instead of squeezing a block.
We're Ahead	Use The Time opens We Have Time with games that fit the extra minutes. Start Next begins the next block now.
Status chip	The top bar shows ON TIME, minutes behind or ahead, or RECOVER while a rescue is running. It clears itself once the protected time arrives.

Day Rescue only changes the live day. In Preview mode it shows PREVIEW — TRY IT so you can explore without changing anything.

Morning Mix

194 classroom-safe discussion topics — one for every school morning, with no repeats. Each topic now carries a **Fixes Twist**: a second question that turns the conversation toward a classroom habit. Open Morning Mix from the Teacher Desk (it also shows a preview card there).

Topic	Anything, Funny, Light, Thoughtful, Quick — plus Sports + Fair Play , Manners and Rules + Choices . Pick one to stay on that kind of question, or leave it on Anything.
Anything = balanced	On Anything, the next topic never repeats the last two kinds, a Sports, Manners or Rules question comes up at least every six mornings, and every kind lasts the whole school year instead of running out early.
The Fixes Twist	Shown under the topic for you, with its kind and the Fix it connects to (Listening, Respect, Responsibility, Directions, Calm Body, Waiting). Students don't see it until you reveal it.
Class Setup	Set once: All Grades , Primary K-2 or Junior 3-6 . Primary uses simpler wording wherever a question needs it. It stays on this browser.
New One	Skip to a different topic. Skipped topics stay in the pool.
Put It Up	Shows the question full-screen for the class. Only topics you put up are marked as used.
Undo Last · Reset School Year	Undo returns the last topic to the pool. Reset starts all 194 fresh — use it at the start of a new school year.

Ask first. Then twist it.

Put It Up shows the question by itself so every student can think about it first. When the class has shared, press **Reveal the Fixes Twist** (or **T**) to add the second question underneath. Press it again to hide it. Return to Schedule (or Esc) goes back to the day.

Everyone gets the invitation. Share · Pass · Come back · Listen — students may pass and come back later. Already using Morning Mix from V28? Your used topics carry over; the 45 new Sports, Manners and Rules topics are added to this year's pool.

KEYBOARD + TROUBLESHOOTING

T	Start the Transition Challenge. While a Morning Mix question is up, T reveals or hides the Fixes Twist instead.
Esc	Close Browse, Day Rescue, Morning Mix, the projected question or the Fix runner.
← / →	Step through a Fix-It Mission.
Schedule is empty or old	It saves per browser. Set up your week on the classroom computer's usual browser, and avoid private / incognito windows.
A website won't show in Browse	That site blocks being shown inside other pages. Press Open Tab.
Pinned view doesn't open	Allow pop-ups for this file when the browser asks.
Fixed time isn't protected	Rename the block plainly (Lunch, Recess, Gym, Music, French, Library, Art, Assembly, Dismissal).

THE TEACHER ROLE: set up the week once, press Start, and let the screen carry the day. Start the morning with one question everyone can answer, then let the twist connect it to how we work together. When school happens, use Day Rescue — the schedule protects the times that matter.
